Quality **A**greement **N**ever **A**bandoned

QANA HOLDINGS GROUP built three subsidiaries at 2002,

GROUP has its expectation and obtains foreigners satisfaction.QANA GROUP leads all the staff going forward with the management faith of "one should be honest, work with heart, pursue for better ". Quality Agreement Never Abandoned.

QANA, you deserve a trading partner!

Our Vision:
Quality products of QANA, enjoy tremendous popularity in the world.
Our Mission:
Have every family around the world to happily enjoy the safety of ecological chain quality products;
Our Values:
Achieve customers, Happy employees, Lead the industry, Benefit shareholders!

Management idea:
Quality Agreement Never Abandoned
Customers' Delivery On Time Is Our Mission
Products Innovation Is Our Life

QANA's Vision

"Bringing love and technology to every family, connecting global brands, and creating commercial prosperity!"
Mission
Driven by love and technology, QANA is committed to building an AI-powered ecosystem of premium products. Through the power of global connections, we bring love and wisdom into every family, brand, and market. We provide global families with convenient, warm, and sustainable happy living experiences, adhering to exceptional quality and innovative intelligence. We not only meet diverse family needs but also empower global brands with industry-leading smart transformation solutions, driving brand value growth and the comprehensive prosperity of a smarter future. Together, we create a better future for human life and the global business ecosystem!
Core Values
Q – Quality
Uphold our commitment to quality and earn global recognition with excellence.
A – Ambition
With a global perspective, strive to lead the industry's development.
N – Novelty
Innovation is the lifeblood of our business, using an ecosystem of premium products to shape the future.
A – Achievement
Create success for customers, happiness for employees, and win-win outcomes for all.
QANA not only strives for synergy between families and brands but also aims to drive the development of global smart living and business ecosystems. With quality, ambition, innovation, and achievement as our foundation, we work hand-in-hand with customers and partners to create a brighter future.
Business Philosophy
"Connecting families with love, bridging opportunities with technology, driving happiness, brand value, and business ecosystem prosperity, and upholding responsibility and ethics to create a better future."
1.Achieving Customers
Always put customer needs at the core. Uphold the principles of honesty and integrity, providing families with convenient, warm, and sustainable happy living experiences. Empower brands to achieve smart transformation and value enhancement.
2.Happy Employees
Respect employee rights, advocate for fairness and inclusion, foster a vibrant and welcoming work environment, inspire innovation potential, and create mutual success for both the company and individuals.
3.Industry Leadership
Commit to exceptional quality and product innovation. Leverage the AI-powered product ecosystem to drive industry development while adhering to sustainable principles, maintaining ecological balance, and fulfilling social responsibilities.
4. Shareholder Returns
Base strategies on sound operations and compliant business practices to safeguard long-term shareholder interests, achieving a win-win for corporate value and social value.
5. Social Responsibility
Uphold ethical standards, support public welfare initiatives, and actively promote education, environmental protection, and social harmony, contributing to the progress of global society.
Core Values and Ethical Principles
• Integrity: Be honest and trustworthy, align words with actions, and earn the trust of customers, employees, partners, and society through integrity.
• Respect for Diversity: Embrace cultural and ideological diversity, advocate for inclusion and cooperation, and build a harmonious and mutually beneficial ecosystem.
• Sustainability: While driving innovation and growth, remain committed to environmental protection and social responsibility to achieve balanced economic and social development.
• Fairness and Justice: Abide by principles of fair competition, uphold business ethics, and reject any form of corruption or injustice.
QANA's Commitment
Driven by "love and technology," QANA connects families, brands, and markets through exceptional quality, innovative intelligence, and ethic

Full Induction

The safest, most effcient way to cook

Induction bases on cast aluminium cookware

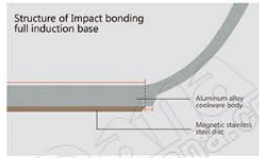

For maximum energy efficiency,we apply with full induction base to the cookware.
There are two kinds of full induction base applying technologies: 1. Impact bonding 2. Brazing

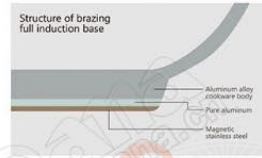

What is Impact bonding?

An impact bonded bases uses friction to form the bond between the base of the vessel and the disc. The disc is place on the base of the vessel, and when passed through the impact bonding machine, through pressure and friction the bond is formed.
For cast aluminum cookware, using s/s plate and thinner cast alu base, no adhesive element is applied, will have risk of peeling off .

What is Brazing?

Brazing is a superior choice in joining dissimilar metals, common applied on s/s cookware, but better performance on cast aluminum cookware We use s/s plate, pure aluminum plate , and thicker cast aluminum base, applying pressure and heat to form the bond which will make it be very strong, never peel off.

Qana

Let's compare the cooking efficiency

With all kinds of inductiton base!

DOTS VS IMPACT BONDING VS BRAZING PLUS

Dots
Induction base

1L Water Boiling time: 06:00

Impact Bonding
Induction base

1L Water Boiling time: 04:55

Brazing plus
Induction base

WINNER

1L Water Boiling time: 03:40

let's compare impact bonding and brazing induction base

APPEARANCE COMPARATION

IMPACT BONDING VS BRAZING PLUS

Impact bonding

because of its impact bonding technology, it have its defect that is the external s/s disc always have to be smaller than its inner flat alu base, so will left nake aluminum circle, at wet condition contact with air will be easy oxidation, even painted,which make the base looking ugly.

Brazing plus

because of its brazing technology advantage,the external s/s disc can cover whole cast aluminum base, there is no nake aluminum, so will not happen oxidation, customer can easy maintain the pan to be elegant, fantastic looks.

WINNER

Full Induction

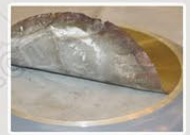

The safest, most effcient way to cook

STRENGTH COMPARATION

IMPACT BONDING VS BRAZING PLUS

Impact bonding

between the aluminum alloy body and s/s disc have no any adhesive element, will have risk of easy peel off after using or maybe have risk to hurt the human body if bubbled (exploded) .

Brazing plus

with pressure and heat add two layer adhesive elements make aluminum alloy, pure aluminum and s/s disc mixed together,very hard to separate, safest!

WINNER

HEAT CONDUCTIVITY COMPARATION

IMPACT BONDING VS BRAZING PLUS

Impact bonding

thin aluminum base with s/s plate,boned together with vacuum,not evenly heat conductivity,some part is less heat, some part is more, cooking performance is not stable.

Brazing plus

Thick cast aluminum base and s/s plate,with pure aluminum circle, melted together by brazing processing, have perfect performance of evenly heat conductivity,best function.

WINNER

BASE BENDING COMPARATION

IMPACT BONDING VS BRAZING PLUS

Impact bonding

As to the structure of the induction cooker, the central magnetic field will be extremely active, so the centre temperature will be highest, as the middle part of the s/s grap the heat, and easily burn the food. Also will make inner base large margin bending,need more oil to cook,not healthy at all.

Brazing plus

With logo part which have no s/s material covered, at some level reduce the magnetic activity at this part, release some heat from the inner centre of the pan, less temperature difference from the side,cooking is more easily, and makes less base bending,require less oil when cooking, much more healthy in daily using.

WINNER

HEAT TRANSFER COMPARATION

IMPACT BONDING VS BRAZING PLUS

Impact bonding(round induction base)

The heat is only focus on the middle of the pan, the food will be easily burnt by the middle part. Due to the round shape disc on the grill pan bottom, only 45% area is working. big waste on energy and not good for cooking.

45% area is working

Brazing plus
(full rectangle induction base)

The logo part on the first stage will be less temperature than the side part, food will be well cooking after several seconds working, then come to second stage will be 90% surface of the grill pan is working , if induction cooker is bigger, finally will be 100%.

First stage

Second stage

90% area is working

WINNER

Summary:

New brazing full induction bottoms with best cooking function and fantastic looks as we can see easily from above performance, for sure in the near future will be the best part for the cast aluminum cookwares.
For the bottom area, round size can be big up to 40cm, also can be rectangle or square or oval or whatever available shapes to be personalized customization if have a project.

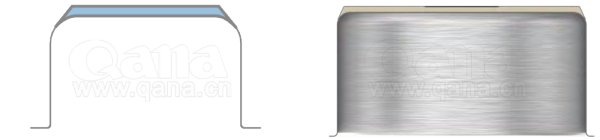

Qana

SS COOKWARE

Different Induction Bases

Brazed Base

Impact Bonded Base

Impact Bonded Base with Exposed Aluminum Core

RIM closed

Middle aluminium layers have been perfect sealed,thus to leave no chance for corrosion on the edge,and ensure the durability.

INDUCTION perfect

With of help of outside layer,430 material,multi-ply pots can be suitable for all types of stove,such as,CERAMIC, INDUCTION,ELECTRIC OR GAS.

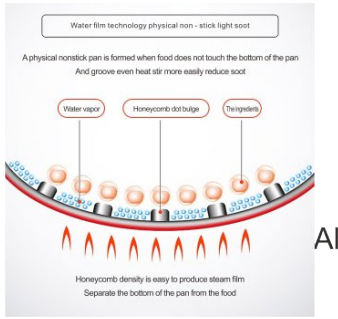

ENERGY saved

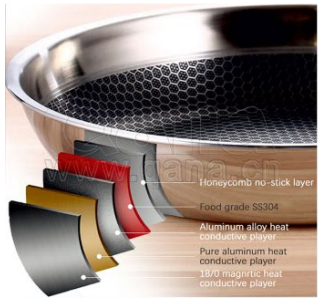

Due to the aluminium core inside,multi-ply pots get all-round cooking properties,which allows more quick & even heat distritbution even to the pots edge.Thus time & energy save.

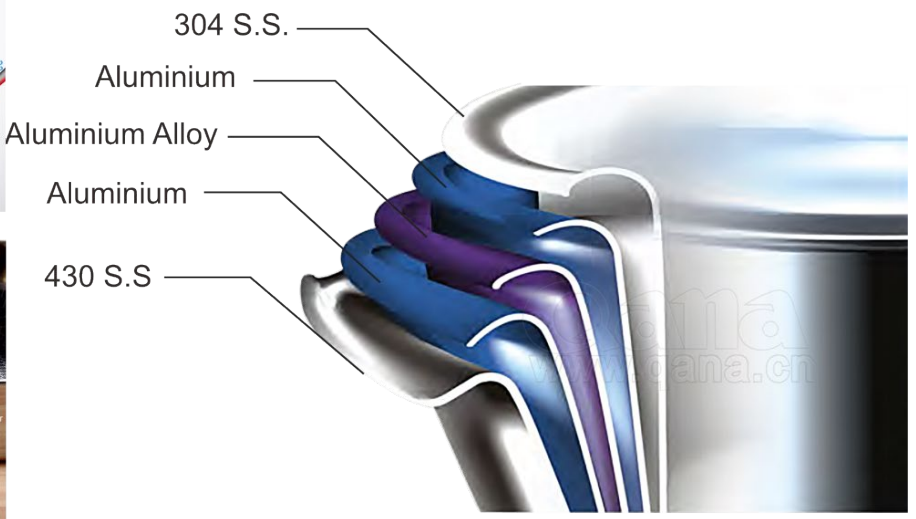

WELDING assembled

Instead of rivet assembling,we have been operating welding connection since 2007.with the welding strength gurantee,we get great appraises fron the final markets.
